JOHN DEERE · GATHERING INSIGHTS

Three ways to tell the insight story

Each turns your Lean UX Canvas + prioritization work into a narrative flow. Reference an option by its badge (e.g. **1a**) in chat.

1A · THE INSIGHT STORY

From questions to a testable bet

The Lean UX Canvas, retold as a linear story — each block answering the one before it.

1. **The questions we started with**
   How do PMs actually make product decisions today? Where does user insight drop out of the process?
2. **Who we were solving for**
   Program Managers across 250+ product lines — the hub role — with Finance, Marketing & leadership around them.
3. **What "success" would look like**
   PMs consistently building the right thing — decisions shaped by user insight, not by shipping every feature.
4. **What users would gain**
   User insight at hand while they plan and decide, inside the workflows & tools they already use.
5. **The insights become a hypothesis**

   We believe **[PMs build the right thing]** is achieved if **[Program Managers]** can **[bring user insight into their workflow]** with **[shared UX frameworks]**.
6. **What we needed to learn first**
   Riskiest assumptions across business & tech — de-risked with lightweight interviews & prototypes before build.

1B · THE FORMULA

Insights, plugged into a formula

We began with evaluative research into how PMs actually make product decisions — then framed the finding as the hypothesis below.

THE HYPOTHESIS

We believe **PMs will focus on building the right thing** if **Program Managers** can **bring user insight into their existing workflow** with **shared UX frameworks & touchpoints**.

OUTCOME
PMs build the right thing — not every possible feature

USER
Program Managers across 250+ product lines

BENEFIT
User insight at hand while they plan & decide

FEATURE
UX infrastructure — shared frameworks & touchpoints in existing tools

HOW WE'D KNOW IT WORKED

Adoption
PMs actually using the frameworks in planning

Value
Decisions traceable to user insight

Speed
Faster from question to validated direction

1C · INSIGHT → BET FUNNEL

Widen, sharpen, prioritize

The gathering-insights arc as a funnel: many signals in, one focused bet out.

01 · GATHER — widen the inputs

Program-manager interviews · Proto-personas · How decisions get made today · Solution ideas · Risk assumptions

▼

02 · SHARPEN — turn signals into hypotheses

We believe **[outcome]** if **[user]** attains **[benefit]** with **[feature]**.

▼

03 · PRIORITIZE — value vs. risk

Focused bet: **UX infrastructure PMs adopt in their own workflow** — begin with evaluative research, then usability testing.
