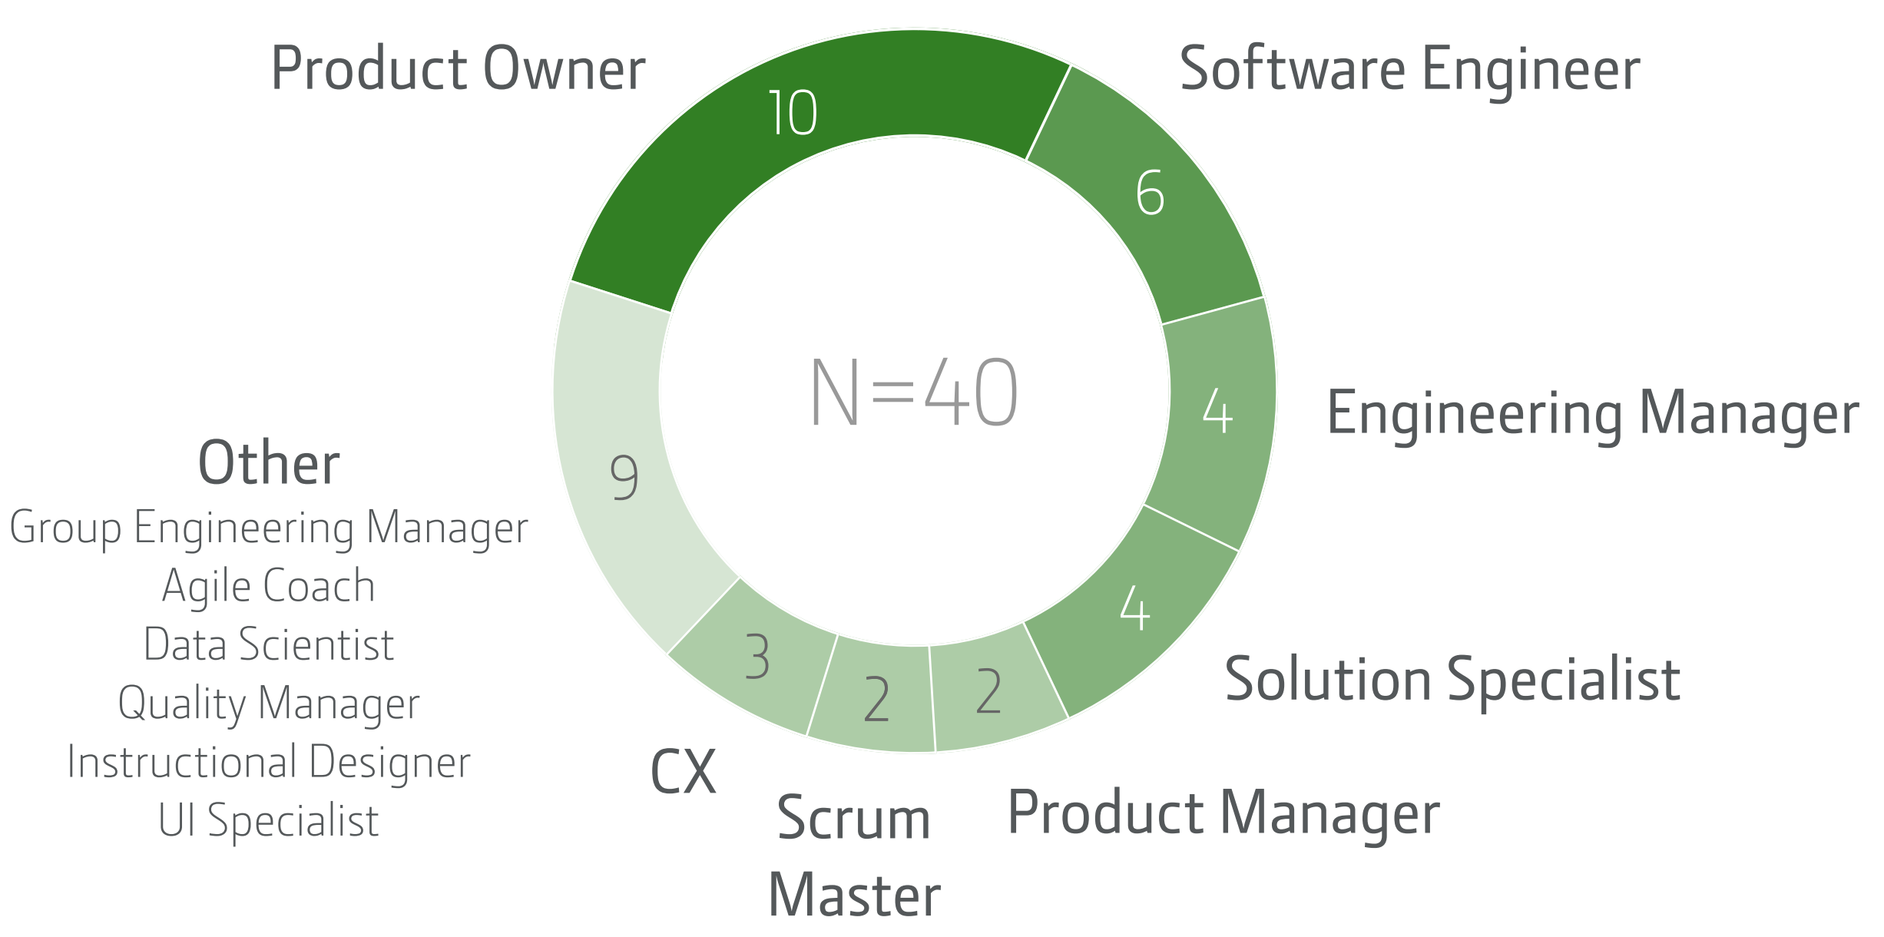
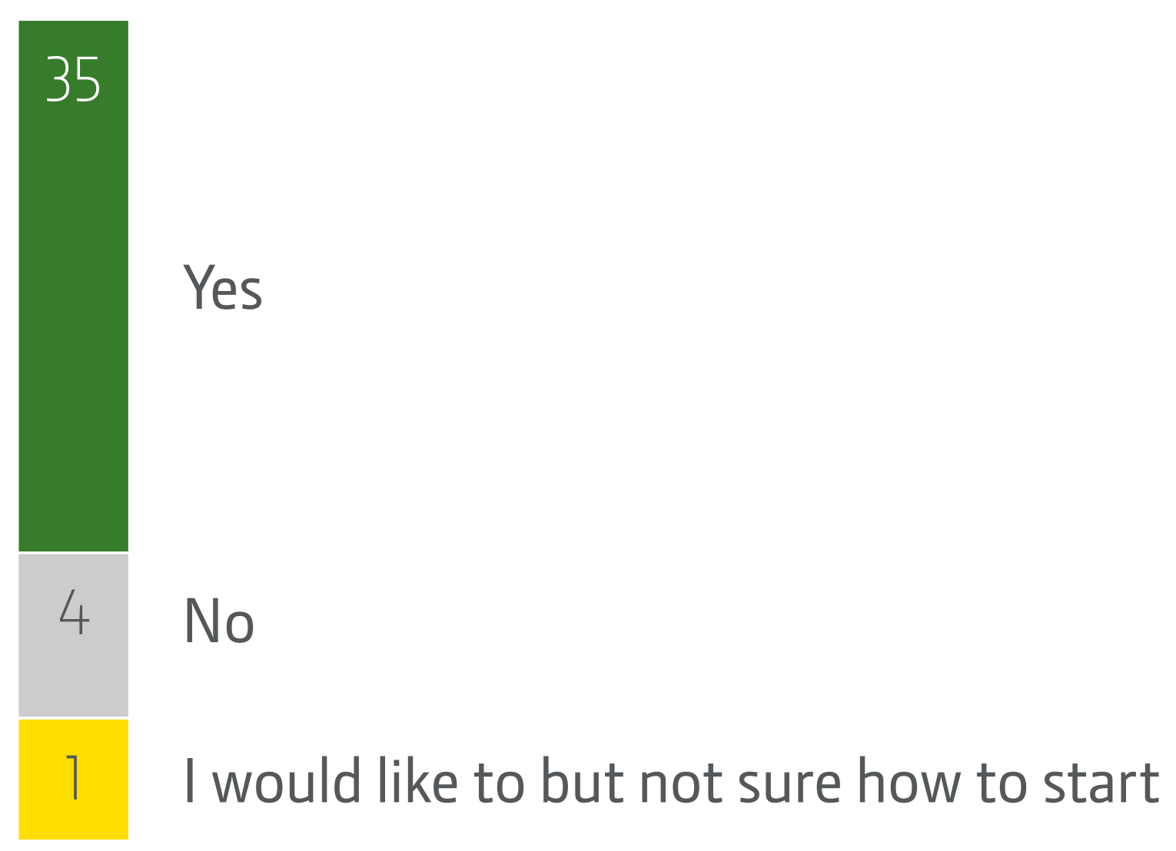
JDF UX Engagement Survey

The John Deere Financial User Experience team has asked JDF product team members how satisfied they are when collaborating with our team. The survey was anonymous, and we used the responses to understand the product teams' needs, wants, and any concerns they might have. There were seven multiple-choice questions and one open-ended, optional, question included in the survey questionnaire. We distributed the survey from June 28th – July 6th, 2021, and it took an average time of seven minutes and thirty six seconds to complete.

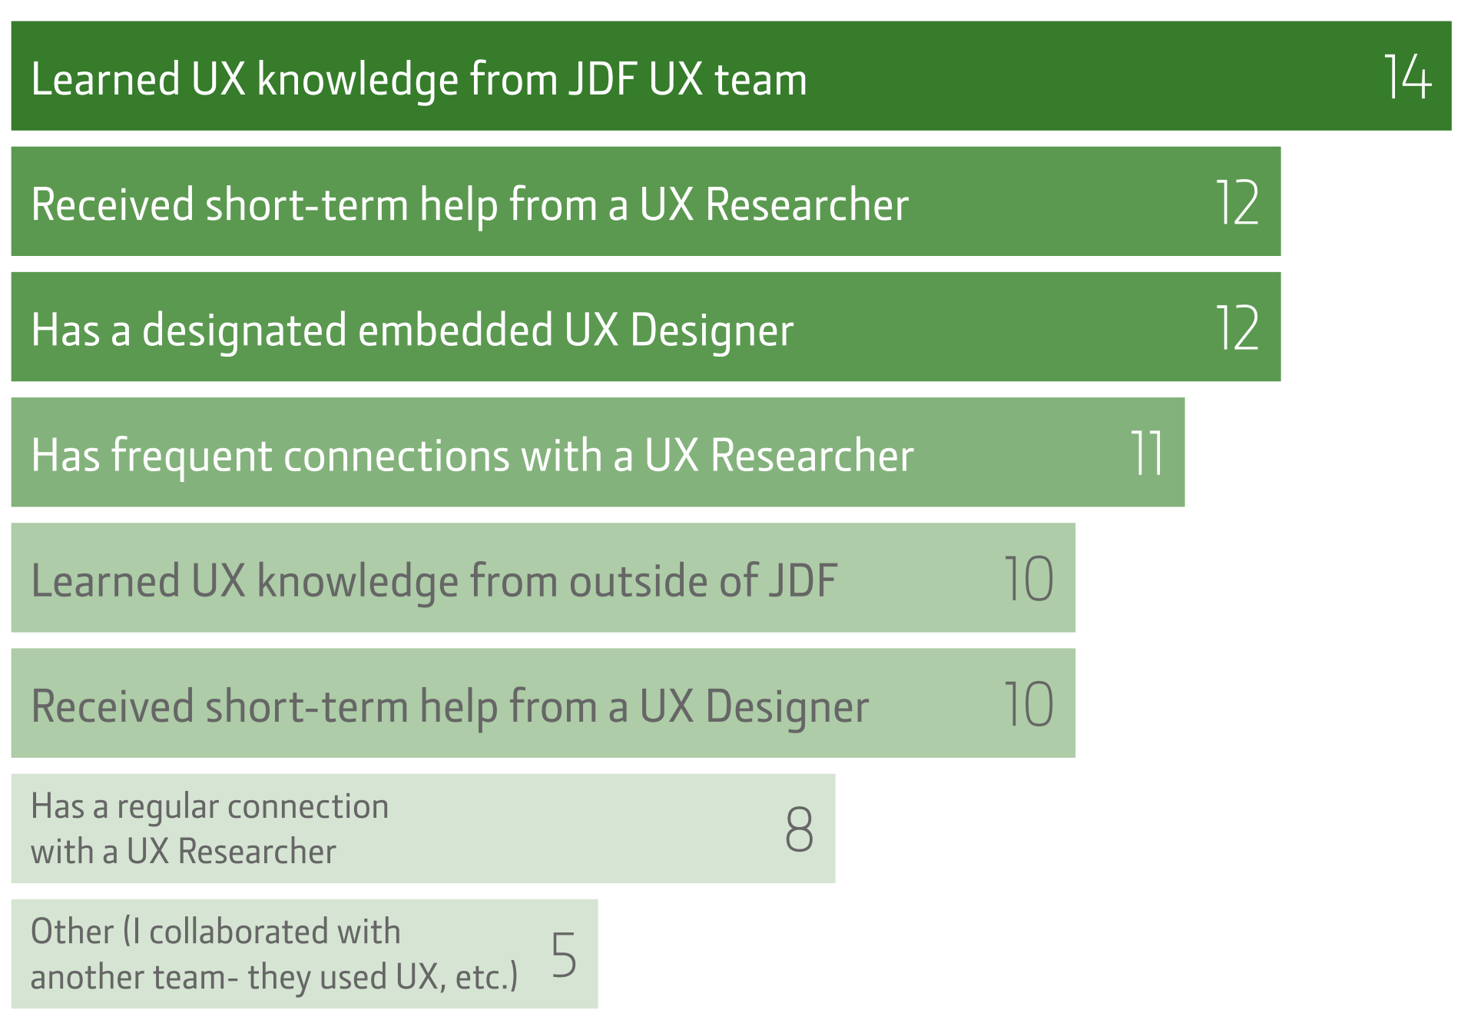
Q1: What is your role?



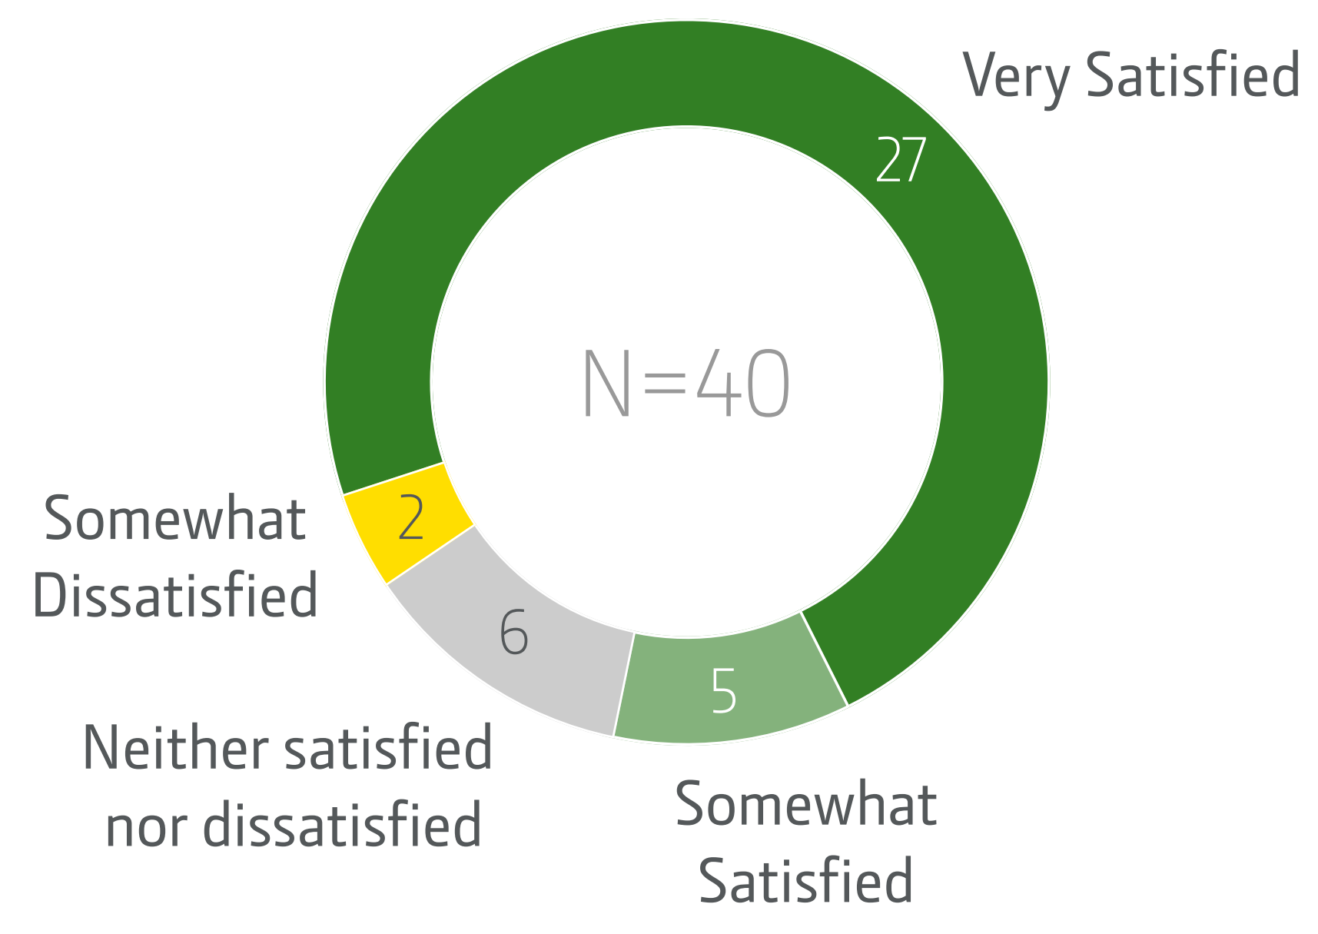
Q2: Have you ever collaborated with a UX practitioner in JDF?



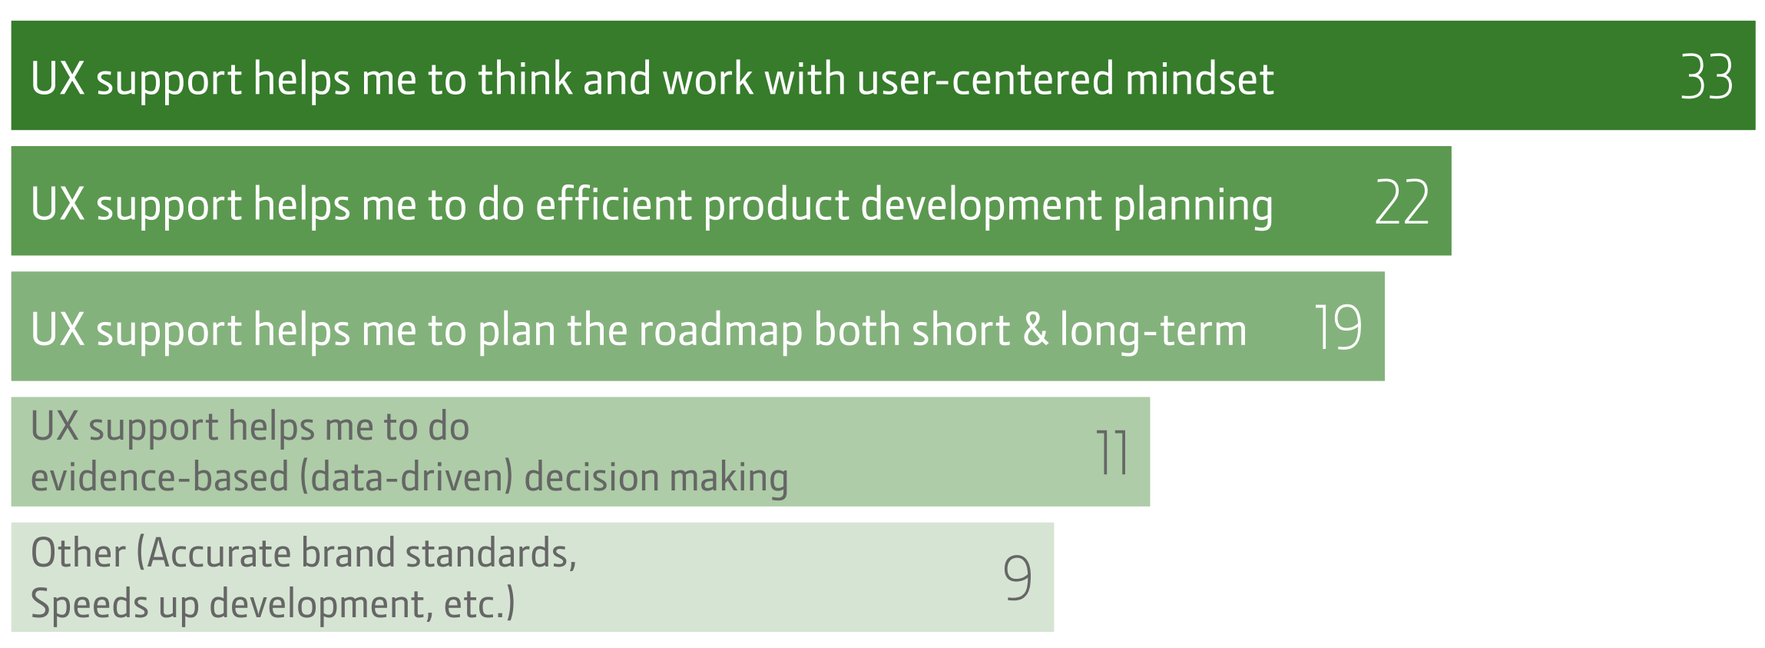
Q3: If you said yes for the Q2, how did you collaborate?



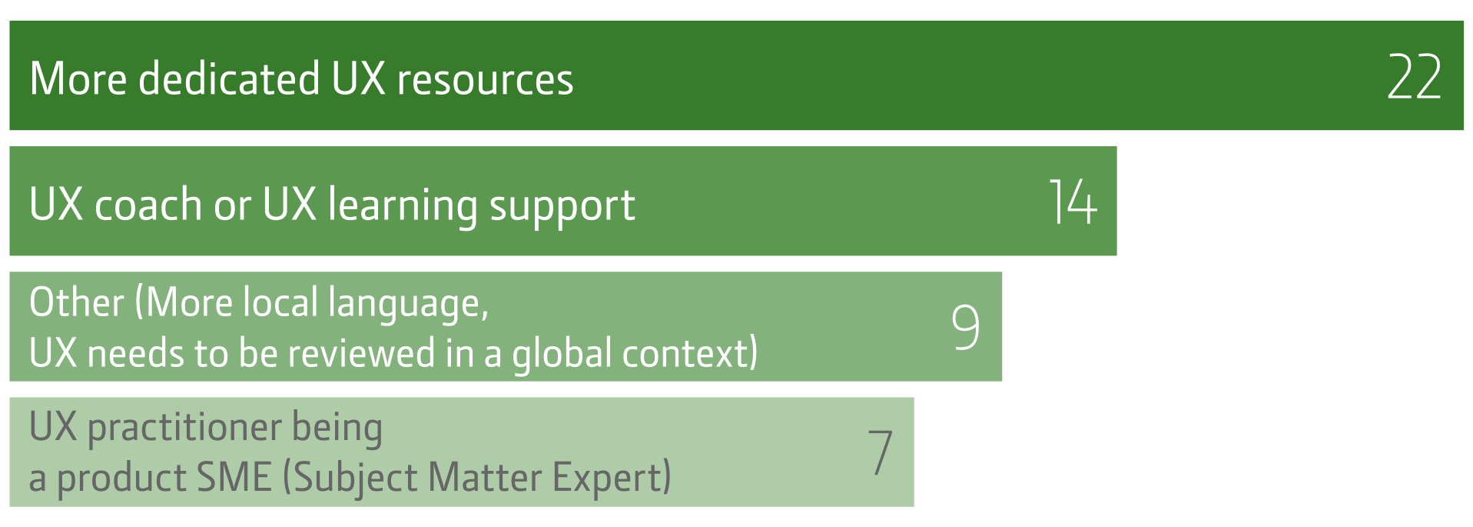
Q4: Please indicate your satisfaction level with JDF UX team.



Q5: What benefits have you experienced?



Q6: Please let us know what areas of improvement JDF UX has.



Q7: Which tasks do you feel should be supported by UX?

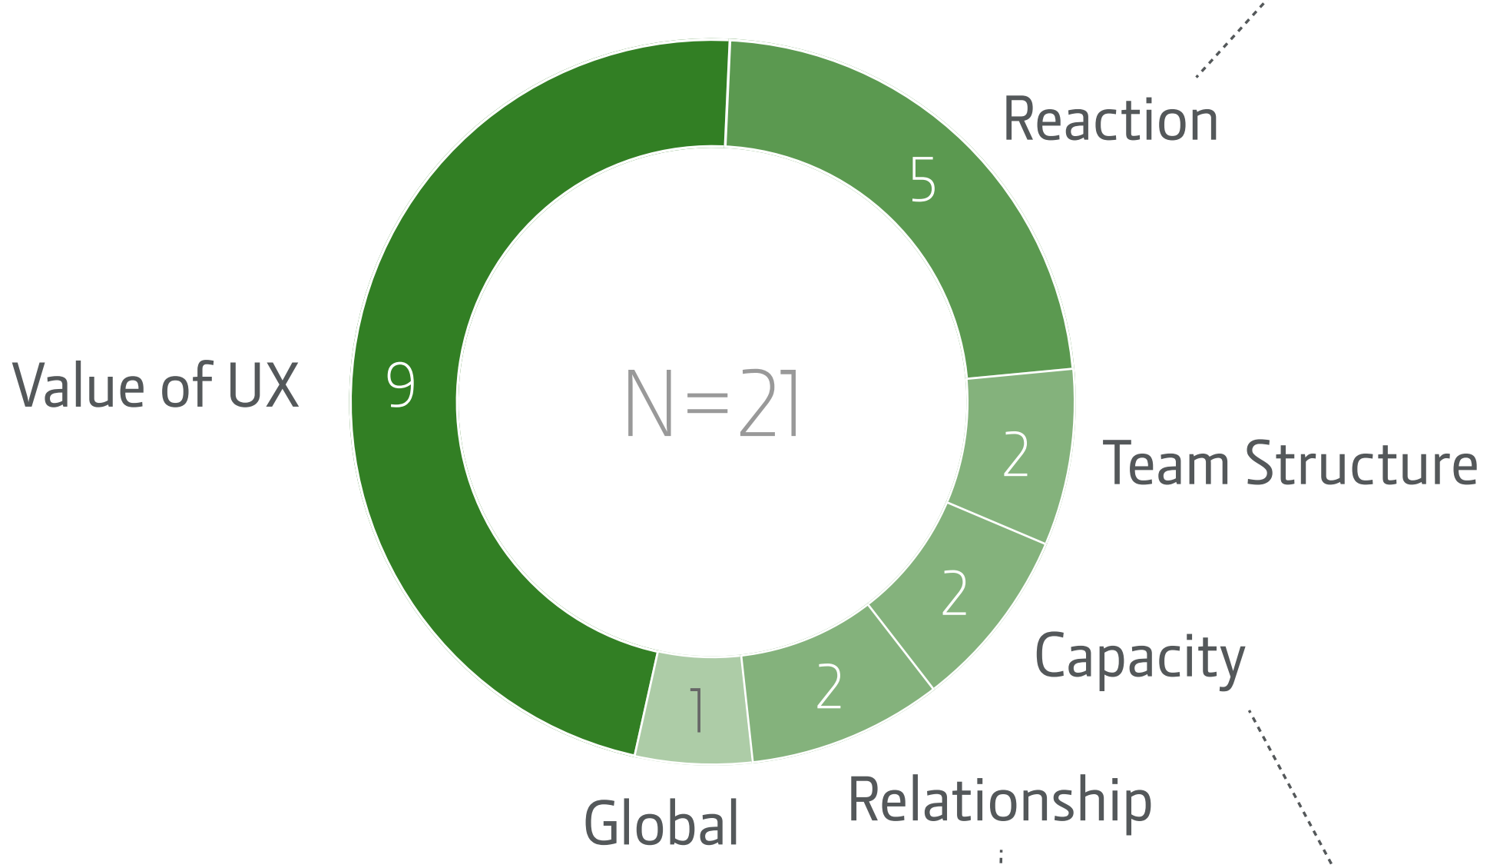
Q8: How was your overall experience with JDF UX team?



“Having an embedded designer is very useful.”

“Excellent. UX team does an excellent job with everything we ask.”

“Collaborating with UX team took our product to the next level.”

“I've had an excellent experience and can't imagine not having these folks available to help me think through design decisions and the approach to creating new features and gaining feedback from users.”

“UX team was wonderful. They provided a lot of insights to our team when we were in initial development stages of a new system. Their guidance and approach gave us the confidence we needed to move forward!”

“The people from UX team is great, but they have too much to deal with and this end up making impossible to them to really understand each product in order to really be able to help us. For me, the problem is how the teams where structured, more than any problem with the team members.”

“I think UX works better when they are integrated and considered a member of the team. So they help with whatever the team needs and priorities are. We work as a unit. I don't think about UX as a supporting team or an external team but rather the integrated designer is a member of our team.”

“As an organization we need greater focus on UX and also need to a keep a global perceptive for the guidelines.”

“I am told by my teams that UX resources are necessary in order to support research and design aspects for the product. We need more because where we have them, we are seeing success where they are engaged.”

“We would like to have a stronger, more frequent relationship with the UX team.”

Thank you very much for your participation in this survey.
