JOHN DEERE · DISCOVER → DEFINE

Framing the Problem

1 Identify — three lenses

User
PMs across 250+ product lines.

+

Need
User insight at hand while they plan and decide.

+

Goal
Focus on the right thing to build, not every feature.

2 Form the statement

PMs need **user insight built into how they already work** so they can **focus on building the right thing, not every possible feature**.

3 Refine to the root cause

DRAFT 1
PMs lack UX skills.
→ blames individuals

→

DRAFT 2
A systems problem: language, timing & support gaps.
→ structural, not personal

→

LOCKED
Infrastructure, not education.

FINAL PROBLEM STATEMENT

John Deere's Product Managers don't need UX ~~training~~ — they need UX **infrastructure**: shared frameworks and touchpoints built into the workflows they already use, so user insight shapes decisions and effort goes to **building the right thing**, not every possible feature.
