Summary

UX Designer with 8+ years of experience in product design for web, mobile, and enterprise platforms. Designs wireframes, mock-ups, interactive prototypes, and developer-ready specifications in Figma, grounds decisions in user research and analytics, and keeps every screen consistent with brand standards and design-system guidelines. Contributed to and extended John Deere's Fuel design system, designed the Team Contract metrics tool from research through Figma screens, built the UrbanFit design system from scratch, lifted e-commerce conversion 11%, and raised enterprise usability from 60 to 85.6 SUS. Facilitates workshops and partners closely with product managers and engineers.

Skills

Design & Prototyping (Figma): Figma (variables, auto layout, variants, components, prototyping, Dev Mode handoff), FigJam, wireframes, high-fidelity mock-ups, interactive prototypes, user flows, design specifications and redlines, style guides and pattern libraries, responsive design across desktop, tablet, and mobile, atomic design, Adobe Photoshop, Illustrator, XD, Sketch

Design Systems: Design tokens (color, type, spacing, semantic status), component libraries and documentation, five-state component specs, brand-guideline compliance, system governance

User-Centered Design & Research: Usability testing, System Usability Scale (SUS), contextual inquiry, stakeholder interviews, affinity mapping, journey mapping, personas, A/B and holdout testing, Hotjar, Google Analytics, workshop facilitation

Front-End (UI languages): HTML5, CSS3, JavaScript, TypeScript, React, Next.js, Tailwind CSS, MUI / MUI X, shadcn/ui, Bootstrap, jQuery, email-safe HTML

Collaboration: Agile, Jira, Confluence, Miro, Mural, design reviews and critiques, cross-functional work with PMs and engineers

Experience

Senior Technical Lead – UX Designer Oct 2022 – Aug 2024

HCLTech (John Deere) · Pune, India

- Designed screens in Figma for John Deere's enterprise B2B platforms by contributing to and extending the Fuel design system: assembled dense interfaces (data tables, dashboards, Gantt-style schedules, comparison views, multi-section forms) from Fuel components, built or extended components where patterns were missing, and used MUI X where Fuel did not cover a case.
- Cut survey setup time 60% and raised completion rates 25% by designing and launching a self-serve survey platform for 250+ internal products, with no developer dependency after launch.
- Made Figma and Fuel learnable for non-designers: ran 50 workshops for 28 product managers and added a use-case index to the Fuel onboarding guide after a SUS study (52 to 78) exposed component-discovery friction.
- Designed for older, less digitally native users with clarity and reduced cognitive load; presented design rationale to leadership, mentored junior designers, and ran stakeholder workshops with India and US teams.

User Experience Research and Design Apr 2022 – Oct 2022

UrbanFit Wellness Private Limited · India

- Built the UrbanFit design system from scratch in Figma: component libraries, type and color tokens, interaction patterns, responsive layout grids, and an atomic design structure.
- Lifted engagement 35%, cut bounce rate 28%, and grew newsletter sign-ups 2.5× by leading the design team on a Figma-based wellness platform redesign guided by Hotjar heatmaps, session recordings, and usability testing.
- Designed Poshmera, a mobile fashion app, from scratch in Figma, plus UI for internal dashboards; ran design critiques and mentored junior designers.

User Experience Designer Jan 2018 – Dec 2021

Capita (for Arcadia Group, NEXT, and other British retail clients) · Pune, India

- Lifted conversion 11% on Wallis by designing a four-layer real-time personalization framework in Figma, measured against 10% blank-ad holdout groups to isolate true incremental impact.
- Raised revenue per visitor 2.5% to 8.43% across six Evans experiences (popularity messaging, urgency badges, social proof, welcome message, checkout simplification) by prototyping and testing each one against its own business case.

- Owned UX and UI in Figma for eCommerce sites across Arcadia's seven brands (Topshop, Topman, Dorothy Perkins, Burton, Wallis, Miss Selfridge, Evans) and NEXT on desktop, tablet, and mobile: navigation, category and product pages, checkout, and account interfaces.
- Built and maintained client design systems, style guides, and pattern libraries in Figma; delivered production HTML5, CSS3, jQuery, and email-safe IBM Silverpop builds with brand compliance.
- Led usability testing during the migration of legacy retail sites onto Magento; promoted from Senior Executive, UI/UX in 2019 after representing Capita on site at Qubit's London office.

Executive – Web / UX Design Jun 2016 – Jan 2018

Vodafone · Pune, India

- Designed internal employee portals and external campaign sites (wireframes, hi-fi mock-ups, responsive HTML5, CSS3, Bootstrap), validating navigation through user feedback sessions, Google Analytics, and A/B testing.

AI/UX Research, AI Systems Sep 2025 – Mar 2026

American Board of Internal Medicine (ABIM) · Philadelphia, PA

- Designed and built a deployed web console (Next.js, TypeScript, Tailwind) for medical content creators to audit exam text for bias, pairing an audit score and compliance rating with flagged evidence and recommended revisions.

Projects

Team Contract: Making Program Metrics Defensible John Deere

UX Research & Product Design · Figma, FigJam, Fuel design system

- Reframed the brief from “what features to add” to “how to make numbers defensible” by running 5 interview sessions with 9 participants and affinity-mapping about 230 observations on a FigJam board into a prioritized action list.
- Designed in Figma, from Fuel components, a modular program-health overview, status indicators with trend history, inline field guidance, plain-language inline validation, per-program configurable metrics, change history with a recorded reason for each edit, and export-ready reporting to replace the PowerPoint screenshots program managers relied on.

Fuel Design System: Enterprise B2B Platform John Deere

Figma · contributed to and extended an existing system

- Assembled screens for a multi-team manufacturing platform from existing Fuel components in Figma, built or extended components where patterns were missing, and documented five states per component with redlines for developer handoff.
- Contributed status color mappings to the semantic messaging tokens, so a single token change updates every table row, status chip, and health card, and contributed additions back with documentation.
- Mapped 20+ jobs-to-be-done flows across five roles, color-coded by effort and complexity, to prioritize design work.

Longitudinal Usability Study: ABTools Credit-Processing Redesign 8 months

John Deere Financial · Solo researcher embedded with the product team

- Raised system usability from 60 to 85.6 SUS (+25.6) by running a within-subject study with a deliberate familiarization window that separated real usability change from novelty bias; all six dimensions improved, led by System Performance (62.5% to 97.5% favorable).
- Surfaced 35 issues from 4 power users; the Notes-formatting problem, raised by every participant, entered the backlog as high priority with the fix specified.

Design Thinking: How Product Managers Make UX Decisions Without UX Support 12 weeks

John Deere · UX Advocate and Researcher, Strategy & Transformation

- Delivered a three-stream programme (Figma and Fuel tool enablement, Buddy-Up mentoring, community forum) from 15 contextual interviews: 100% tool adoption from 0%, 50 workshops for 28 PMs, 83% Buddy-Up retention, and NPS 86.

Education

M.S., Computer Science (Artificial Intelligence and Machine Learning) Sep 2024 – Mar 2026

Drexel University, College of Computing & Informatics · Philadelphia, PA

Certifications

Google UX Design Professional Certificate · Understanding Research Methods, University of London (SOAS) · Journey Mapping for Users, Nielsen Norman Group
